CUSTOMER QUOTE

"Whitetail is simply an outstanding contractor. This firm is a true winner with outstanding players that I would be honored to work with at any time."

Project Manager - USACE Savannah District

Information Technology/Management System Services

Whitetail has designed, implemented, and sustained numerous Information Technology (IT) solutions and Management Systems for Federal Agencies and industry. Our IT and environmental compliance experts deliver customized applications that streamline decision making, centralize data and document management, and readily demonstrate our clients' regulatory compliance during audits and inspections.

Our staff includes web and mobile application developers that provide our clients with current, relevant, and easy-to-use tools that allow them to more effectively manage their environmental programs based on the principles of Plan–Do– Check–Act.

We have developed complex, large-scale environmental management systems (EMS) and related software applications for numerous federal customers as well as Microsoft SharePoint-based work-flow management, dashboards, and document management services for several clients. Our staff have active Department of Defense (DoD) security clearances that allow us to work with federal customers both on-site and remotely. The following describes Whitetail's capabilities with developing and deploying IT and management system solutions:

- Whitetail supported a hierarchical EMS and sustainability management systems for the Army National Guard (ARNG) and individual Army Guard States under a multi-year contract. We provided webmaster support on Guard Knowledge Online (GKO) a SharePoint/cloud based application for 54 States and Territories.

- Whitetail supports Naval Hospital Camp Pendleton (NHCP) with an annual internal audit and review of their EMS Manual and programs. We perform an integrated environmental assessment and EMS evaluation to meet Tier II audit requirements, identify gaps, and provide solutions to prepare for future external Environmental Quality assessments by the Bureau of Medicine and Surgery (BUMED).

- Whitetail cultural resource field teams at U.S. Army Garrison Fort Carson, Colorado use state-of-the-art Trimble GPS units and mobile tablets to collect coordinate information, pictures, and monitoring data that synchronizes with a web-enabled database and GIS data tables. This mobile application of technology allows our archeology teams to be more efficient and thorough in their operations.

- Whitetail integrated the Maine ARNG enterprise GIS with their Utility Manager Pro (UMPro) database to enable our client to more effectively visualize and manage their utility (i.e. water and electricity) usage by facility. This integration of two government owned databases supported a variety of mission needs and Army Net Zero reporting requirements.

- Whitetail developed mobile-based forms for the purpose of routine compliance inspections for the U.S. Army Reserves, 99th Regional Support Command; Fort Hood Army Post, Texas; and the Louisiana ARNG. These forms allow field staff to capture data while out in the field and enables analysis of trends and real-time tracking of inspection schedules.

- Whitetail developed interactive on-line Hazardous Waste Management Plans for the New York, Michigan, New Mexico, and Colorado ARNGs. These plans are published in a web-based format with active links and content as opposed to a more traditional single PDF document.

- Whitetail has designed, developed, and managed EMS SharePoint websites for over a dozen ARNG states.

- Whitetail developed and deployed a web-based training management system for a private oil and gas company that houses all of their environmental documents and manages and deploys their web-based training courses.
